Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended): An organic EL device comprising an anode, a cathode, and an organic layer including a plurality of light emitting layers provided between the anode and the cathode, wherein said light emitting layers comprise a red light emitting layer provided on the anode, a green light emitting layer provided directly on the red light emitting layer, and a blue light emitting layer provided directly on the green light emitting layer,

wherein said blue light emitting layer comprises a positive and negative charge transporting blue light emitting layer and an electron transmitting blue light emitting layer laminated in this order from the anode side.

Claims 2-7 (canceled).

Claim 8 (currently amended): A display comprising a color filter provided on a light take-out surface side of an organic EL device for emitting white light, wherein

said organic EL device comprises an organic layer including a plurality of light emitting layers, said organic layer interposed between an anode and a cathode; and

said light emitting layers comprise a red light emitting layer, a green light emitting layer, and a blue light emitting layer laminated in respective order from the anode side,

wherein said blue light emitting layer comprises a positive and negative charge transporting blue light emitting layer and an electron transmitting blue light emitting layer laminated in this order from the anode side.

Claim 9 (previously presented): The organic EL device as set forth in claim 1, wherein said red light emitting layer is composed of a single layer.

Claim 10 (previously presented): The organic EL device as set forth in claim 1, wherein said green light emitting layer is composed of a single layer.

Claim 11 (previously presented): The organic EL device as set forth in claim 1, further comprising a protective film covering the organic layer.

Claim 12 (previously presented): The organic EL device as set forth in claim 1, wherein said red light emitting layer supplies holes to the green light emitting layer.

Claim 13 (previously presented): The organic EL device as set forth in claim 1, wherein said blue light emitting layer supplies electrons to the green light emitting layer.

Claim 14 (currently amended): An organic EL device comprising an anode, a cathode, and an organic layer including a plurality of light emitting layers provided between the anode and the cathode, wherein said light emitting layers comprise a red light emitting layer provided on the anode, a green light emitting layer provided directly on the red light emitting layer, and a blue light emitting layer provided directly on the green light emitting layer, wherein each of said red light emitting layer and green light emitting layer is composed of a single layer,

wherein said blue light emitting layer comprises a positive and negative charge transporting blue light emitting layer and an electron transmitting blue light emitting layer laminated in this order from the anode side.

Claim 15 (previously presented): An organic EL device as set forth in claim 14, further comprising a protective film covering the organic layer.

Claim 16 (previously presented): An organic EL device comprising an anode, a cathode, and an organic layer including a plurality of light emitting layers provided between the anode and the cathode, wherein said light emitting layers comprise a red light emitting layer provided on the anode, a green light emitting layer provided directly on the red light emitting layer, and a blue light emitting layer provided directly on the green light emitting layer,

wherein said blue light emitting layer comprises a positive and negative charge transporting blue light emitting layer and an electron transmitting blue light emitting layer laminated in this order from the anode side.

Claim 17 (previously presented): The organic EL device as set forth in claim 1, wherein said red light emitting layer has a hole transporting property, said green light emitting layer has a positive and negative charge transporting property, and said blue light emitting layer has an electron transporting property.

Claim 18 (previously presented): The display as set forth in claim 8, wherein said red light emitting layer has a hole transporting property, said green light emitting layer has a positive and negative charge transporting property, and said blue light emitting layer has an electron transporting property.

Claim 19 (previously presented): The organic EL device as set forth in claim 14, wherein said red light emitting layer has a hole transporting property, said green light emitting layer has a positive and negative charge transporting property, and said blue light emitting layer has an electron transporting property.

Claims 20-22 (cancelled).
